EDUCATION

Rutgers University - New Brunswick, NJ

Expected Dec 2027

B.S. Data Science (CS Track) with Business Administration on side

Honors: Dean's List; DTPLC Scholar | **Relevant Coursework:** Data Structures, Linear Algebra, Computer Programming II

Organizations: DTPLC, Quantitative Finance Club, ColorStack, AI Club, Data Science Club

Online Courses: HarvardX CS50x: Python with AI; University of Colorado Boulder: Data Analytics for Business; HarvardX CS50x: Introduction to Computer Science

EXPERIENCE

Quantitative Finance Club - Rutgers University

Current

Quantitative Research Team Member

- Selected from a competitive applicant pool to join a 3-person research team conducting a 12+ week quantitative study on options-based trading strategies.
- Reproduced and tested options strategy using historical data, evaluating returns, volatility, and risk-adjusted performance.
- Collaborated in a version-controlled GitHub environment to implement strategy logic, document methodology, and deliver a formal research report and final presentation

SterSoft Solutions Pvt. Ltd. (Remote)

Jul 2025 - Sep 2025

Web Development Intern

- Developed responsive, client-facing web interfaces using HTML, CSS, JavaScript, and Bootstrap, ensuring consistent performance across devices and browsers.
- Integrated authentication systems, dashboards, and API-driven workflows to support secure user interactions and business Operations.
- Conducted QA and performance testing to reduce client-facing friction, while documenting deployment and handoff processes to improve clarity between technical and non-technical stakeholders.

Hollister Co. (Abercrombie & Fitch Co.) - Edison, NJ

Nov 2024 - Sep 2025

Client Engagement & Operational Workflow Optimization Specialist

- Earned Associate of the Month multiple times as the sole recipient for exceeding performance, leadership, and service benchmarks.
- Served as the primary on-shift decision-maker, resolving time-sensitive issues, prioritizing competing needs, and maintaining service quality during peak traffic.
- Trained and onboarded numerous hires, reducing ramp-up time and improving consistency of service delivery.

PROJECTS

FactorLab — Cross-Asset Factor Research & Backtesting Engine (Ongoing)

Jan 2026

Python, FastAPI, PostgreSQL, Redis, Celery, Next.js, TypeScript, Pandas

- Building a cross-asset factor research and backtesting platform to test investment ideas across ~12 ETFs spanning equities, rates, credit, commodities, and REITs, using 10+ years of historical data (~30k–75k daily price records).
- Implementing systematic factor signals (trend, cross-sectional momentum, low volatility) with proper research controls signal delays, lagged weights, turnover limits, and transaction cost modeling to ensure realistic, bias-free results.
- Developing an asynchronous workflow with experiment tracking and robustness testing (50+ experiments; 20–60 runs per sweep), plus interactive dashboards and exportable tear sheets to clearly present results.

F1Predict - Real-Time F1 Qualifying Prediction Engine

Nov 2025

Python, XGBoost, FastAPI, Pandas

- Architected a real-time forecasting pipeline integrating multi-season historical datasets with live telemetry streams, enabling continuous probability-based outcome modeling under volatile conditions.
- Engineered session-aware and circuit-specific feature sets that reduced prediction volatility by 38%, improving reliability and interpretability in high-noise environments.
- Deployed a low-latency FastAPI inference service (<120ms per cycle) with automated drift handling and streaming ingestion to simulate time-sensitive decision workflows.

SKILLS

Technical Skills: Python, Java, PostgreSQL, Redis, Celery Next.js, Pandas, SQL, JavaScript, HTML/CSS, XGBoost, scikit-learn, Pandas, FastAPI, Streamlit, React.js, Tailwind CSS, Bootstrap, Framer Motion, Figma
